WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Rails: two 1,200 mm lengths of 40 x 40 x 1.5 tube. Cross tubes: three 520 mm lengths, at both ends and the middle, between the rails.
Weld square on a flat table: diagonals equal within 2 mm. Tube tops are 455 mm above the ground when parked. Cap the four rail ends (3 mm).
Deck: expanded steel sheet 1,200 x 520 mm laid on the cross tubes between the rails, stitch welded 25 mm every 150 mm.
Axle brackets: 60 x 5 mm plate, 247 mm long, under each rail at 630 mm from the front end, 290 mm from the centre line; 20.5 mm axle hole 35 mm above the bottom. Gusset 87 x 85 x 5 mm to the middle cross tube.
Hinge tabs: eight 30 x 3 mm, 75 mm long, on the rail outer faces at 60, 420, 780 and 1,140 mm from the front end, 39 mm above the rail top.
Handle sockets, leg clevises, shade tabs: see the frame layout picture.
Check: deck flat within 3 mm; axle holes line up (20 mm bar slides through).
