WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut four 387 mm lengths of 25 x 2 mm tube; round the top end.
Drill 10.5 mm across the tube 12 mm from the top: the pivot.
Drill 6.5 mm across, 30 mm below the pivot hole: the detent hole that locks the leg down.
Weld a 60 x 60 x 5 mm foot plate square on the bottom end.
Fit: the top end goes between a pair of 3 mm clevis plates under the rail, 40 mm from the rail end; M10 pivot bolt, nyloc nut, snug so the leg swings. Spring detent pin through the clevis and the leg holds it down; a second clevis hole holds it folded.
The leg folds inward along the rail, foot toward the axle.
Check: with all four down the deck is level within 1 degree.
