WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Long members: two 1,400 mm lengths. End members and ribs: five 660 mm lengths. All 30 x 20 x 1.5 tube, 30 mm side upright.

Ribs at 350, 700 and 1,050 mm from one end, square to the long members.

Join every butt with an aluminium corner cleat inside the tubes and four 4.8 mm blind rivets (or TIG weld). Frame 1,400 x 700 mm.

Face (top): flat within 2 mm; the module is bonded to it.

Inner long member (hinge side): M4 rivet nuts every 150 mm in its inner face, 10 mm below the top, for the hinge's moving leaf.

Outer long member: outrigger brackets underneath at 80 mm from each end; tie bar bracket (left wing) or keeper (right wing) at each end.

Check: diagonals equal within 2 mm; frame does not rock on a table.
