WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Leg: cut 269 mm of 25 x 2 mm tube; round the top end; drill 8.5 mm across, 10 mm from the top (pivot), and 6.5 mm 30 mm below it (detent).

Foot: 50 x 50 x 4 mm plate with a 28 x 30 mm stake tab on one side (11 mm hole, 15 mm from the plate edge); weld square to the leg.

The tab points toward the nearer end of the cart.

Bracket: bend a 3 mm aluminium strip into a U, 26 mm inside, legs 29 mm, web 45 mm long; 8.5 mm pivot hole through both legs.

Fit: rivet the web under the wing's outer long member, 80 mm from the frame end; M8 pivot bolt, nyloc nut, snug.

Leg down: vertical with the wing at 15 degrees. Folded: flat under the wing, 7 mm clear of the frame.

Check: the wing's outer edge sits 309 mm above the ground.

FIELDCELL
