WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut two 731 mm lengths of 20 x 20 x 1.5 mm square tube; deburr (743 mm overall with the latch body on the end).

Drill 6.5 mm across, 10 mm from one end: the pivot.

Rivet the over-centre latch body to the other end, hook outward.

Pivot bracket: 3 mm aluminium angle, ear 35 mm tall beside the bar, riveted to the top corner of the left wing's frame, on its back.

Keeper: screwed to the top of the right wing's outer member, 12 mm in from its back face, opposite the latch.

Travel: the bar lies across the tops of both stowed wings and the latch pulls the right wing in against it.

Parked: the bar folds down the back of the left wing, held by a clip.

Check: latched, neither wing moves when pushed outward at the top.

FIELDCELL
